

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion Threads Documentation

Polytechnic University of the Philippines

Dela Cruz, Raven Nicole C.

BSIT 4-2

Project Overview

HandsMen Threads: *Elevating the Art of Sophistication in Men's Fashion* is a Salesforce CRM implementation designed for a conceptual luxury menswear brand. The CRM centralizes key business data including customer profiles, orders, product information, inventory levels, and marketing campaigns.

This project leverages Salesforce standard and custom objects to replicate real-world business processes such as order tracking, product management, stock monitoring, loyalty status progression, and automated communication. Through validation rules, flows, Apex logic, reports, and dashboards, the CRM enhances data accuracy, reduces manual work, and supports business decision-making.

Objectives

The primary objective of this CRM project is to build a Salesforce-based business solution for HandsMen Threads that:

- Centralizes customer, product, order, and inventory data into a unified system.
- Utilizes standard and custom Salesforce objects tailored to a retail fashion business.
- Automates processes such as order status updates, loyalty program scoring, and stock monitoring.
- Ensures data accuracy through validation rules, workflows, and controlled input fields.
- Provides real-time analytics through custom reports and dashboards.
- Demonstrates applied Salesforce administration, customization, automation, and development skills required for the SkillWallet Capstone.

Phase 1: Requirement Analysis & Planning

Understanding Business Requirements

HandsMen Threads, a conceptual premium menswear brand, requires a CRM capable of:

- Managing product catalog and real-time inventory stock.
- Recording customer profiles, preferences, loyalty levels, and purchase history.
- Tracking customer orders and monitoring order status (Pending, Processing, Completed).
- Running marketing campaigns with target segmentation.
- Automating customer notifications and internal workflows.

Project Scope

The CRM focuses on Salesforce configuration and light development for:

- Customer, Product, Order, Inventory, and Marketing Campaigns objects.
- Email automation for order updates and loyalty level changes.

- Inventory alerts when stock reaches critical levels.
- Reports and dashboards for product performance, sales, and customer segmentation.
- Apex code for automated calculations and batch processes.

Custom Objects

- **Inventory__c** – stores stock quantity per product
- **Marketing_Campaign__c** – manages promotions and campaign details
- **HandsMen_Customer__c** – customer profiles and loyalty level
- **HandsMen_Order__c** – records customer orders and status
- **HandsMen_Product__c** – product catalog for the brand

Phase 2: Salesforce Development – Backend & Configurations

Setup Environment

The project was developed in a Salesforce Developer Edition org dedicated to CRM configuration, automation building, and testing.

Custom Objects, Fields, and Validation Rules

Custom Objects Implemented

- Inventory__c
- HandsMen_Product__c
- HandsMen_Order__c
- HandsMen_Customer__c
- Marketing_Campaign__c

Validation Rules Implemented

1. **Correct Customer Email Rule**
Ensures proper email format is entered before an order can be saved.
2. **Total Amount Validation Rule**
Ensures total amount cannot be negative or zero.
3. **Stock Availability Validation**
Prevents creating orders when inventory is insufficient.

The screenshot shows the Salesforce Setup interface for the 'HandsMen Order' object. The left sidebar contains a navigation menu with options like Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Scoping Rules. The main content area displays the 'HandsMen Order Validation Rule' details. The rule is active and has the following configuration:

Validation Rule Detail		Active
Rule Name	Total_Amount	✓
Error Condition Formula	Total_Amount__c <= 0	
Error Message	Please Enter Correct Amount	Error Location: Total Amount
Description

Automation Implemented

- **Order Status Flow** – automatically updates order status based on actions
- **Low Stock Alert Flow** – triggers email notification when stock reaches minimum level
- **Loyalty Program Flow** – updates customer loyalty (Bronze → Silver → Gold) based on purchase totals
- **Workflow Emails** – email alerts for order confirmation and stock alerts

Apex Classes and Triggers

1. **OrderTotalTrigger**
Automatically calculates and updates order totals.
2. **StockDeductionTrigger**
Deducts inventory quantity when an order is confirmed.
3. **InventoryBatchJob**
A Batch Apex class that processes inventory and flags items with critically low stock.

Reports & Dashboards

Custom reports built:

- Customer Loyalty Report
- Product Performance Report
- Sales Summary Report
- Inventory Stock Report

Dashboards include:

- Sales Overview
- Inventory Overview
- Customer Insights

Phase 4: Data Migration, Testing & Security Data Loading

Sample customer, product, inventory, and order data were uploaded through:

- Manual data input
- Data Import Wizard

Security: Profiles, Roles, Permission Sets

- Profiles control access to custom objects.
- Role hierarchy provides management visibility.
- Permission sets offer additional access for reports/dashboards.
- Sharing rules restrict access to sensitive records.

Field History Tracking / Duplicate & Matching Rules

- Field History Tracking enabled for customer loyalty level, order status, and stock quantity.
- Duplicate rules prevent customer duplication.
- Matching rules assist proper identity matching.

Testing Approach & Test Results

Testing verified:

- Validation rules trigger correctly
- Flows run correctly (order status, loyalty level, low stock)
- Email alerts trigger consistently
- Apex logic updates totals and deducts stock properly
- Reports reflect accurate data

The screenshot displays the Salesforce Flow Builder interface. The main canvas shows a 'Record-Triggered Flow' starting with a 'Start' event, followed by a 'Run Immediately' action, and then an 'Order confirmation Email Alert' action. The right-hand panel is titled 'Configure Start' and contains the following sections:

- Select Object:** A dropdown menu showing 'HandsMen Order'.
- Configure Trigger:** A section titled 'Trigger the Flow When:' with four radio button options: 'A record is created', 'A record is updated' (selected), 'A record is created or updated', and 'A record is deleted'.
- Set Entry Conditions:** A section with a text area for specifying entry conditions to reduce the number of records that trigger the flow.

The bottom of the interface shows a Windows taskbar with various application icons and a system clock indicating 12:20 pm on 11/28/2025.

Flow Builder interface for "Low stock alert - V1". The flow starts with a "Record-Triggered Flow" trigger for the "Inventory" object, triggered when "A record is created or updated". The flow then proceeds to a "Run Immediately" step, followed by a "Low stock alert" email alert, and finally an "End" step.

Configure Start

Select Object
Select the object whose records trigger the flow when they're created, updated, or deleted.
* Object: Inventory

Configure Trigger
Trigger the Flow When:
☐ A record is created
☐ A record is updated
☒ A record is created or updated
☐ A record is deleted

Set Entry Conditions
Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.
If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.
Condition Requirements

Flow Builder interface for "Loyalty program - V1". The flow starts with a "Set a Schedule" trigger (Nov 27, 2025, 12:00 AM, Once). It then proceeds to "Get customers", "loop through records", and a "loyalty status check" decision. Based on the status (Gold, Bronze, Silver), it updates the record and then sends a "Loyalty program" email alert. The flow ends with an "End" step.

Set a Schedule

* Start Date: Nov 27, 2025
* Start Time: 12:00 AM
Frequency: Once

Conclusion

The HandsMen Threads CRM successfully transforms the brand's operations into a modern, structured, and efficient system while staying aligned with the brand's dedication to sophistication. By integrating automation, personalized customer management, and strong data-driven insights, the solution enhances both internal processes and overall customer experience. This CRM sets a foundation for growth, precision, and continued excellence in men's fashion.
